

Pole To Win Co., Ltd.

Company Description

**Armed with the keen sense of an industry pioneer
Create something Brand New together**

In February 2022, Pole To Win, Pit Crew, and QaaS merged to form a single company.

Since our founding in 1994 as Japan's first specialized independent testing company, Pole To Win has helped bring over 6,000 game software titles and over 10,000 titles to market. We established the industry's first online support company Pit Crew, providing customer support, e-commerce fraud prevention, and other online support services. QaaS was established to provide consultation support for developers and game makers to provide third-party quality verification services. These three companies have evolved to meet the changing demands of the industry, developing solutions to support cutting-edge IT services.

Our strength is in our ability to leverage the expertise of these three companies to provide a comprehensive service package which extends to include cyber security, system development, and global support, serving as a bridge to our group companies in Japan and around the globe.

In each of these fields we are utilizing the latest technologies to maximize efficiency. At the same time, we place great importance on those aspects that require a human touch—for which we have received continuous high praise for since our founding. It's the fusing of these two approaches which allows us to deliver the optimal solutions to our clients. This approach is reflected in our latest advertising campaign, "They've got the knack."

With this merger, we've created a system that can seamlessly provide a wide range of services across your product's entire service life cycle, from planning and development phases, right up through your product's release, and on to post-release operations and post-release tweaks and improvements. We are fully committing all our efforts on creating something "Brand New" together with our clients.

We believe that our client's success is directly related the joy and satisfaction of their end-users, and in order to help ensure this success, our every effort is devoted to providing reliable, convenient, and creative services.

Don't be afraid to set your expectations high.
