Job Description

Duties

(1) Development areas of responsibility of your organization, outline of work and role/position within R&D

- Design and experimentation for advance development of cloud systems and project development in connected cars and services for the global market.

- Specifically, (1) next-generation back-end system advanced development, (2) cloud development for connected services

(2) Specific responsibilities and expected roles and positions within and outside your own department

Design and develop cloud platforms and cloud applications for connected cars and services to provide the connected services required in the global market.   Also, after the release of the service, continuously work on additional requirements, design, and quality improvement to maintain competitiveness.

(3) Work environment and work style (member composition, workplace atmosphere, and characteristics)

The team consists of our company and partner companies, and many of our employees are mid-career hires from IT/infrastructure companies.

There are meetings with partner companies, including offshore companies, and regions where connected cars & services are deployed, and there are many opportunities for communication using English.

We actively participate in interdepartmental study sessions and external training courses, making time every week to improve our skills and product competitiveness separately from our work.

＜Appealing points (attractiveness of the job)

(1) Personal growth, skills acquired, and satisfaction gained through the job

The most rewarding aspect of the job is the ability to develop creative ways to connect various things to the car and provide new services and new value to customers around the world.

Knowledge of connected cars & services in general, knowledge and skills in cloud system development for vehicle projects, and global and diverse culture and communication skills can be acquired.

(2) Career and position you can aim for in the future

After fostering a career as an engineer in cloud system development for connected cars and services, you can advance to a management position.

*You can also choose another career path within our company depending on your own desire.

Required Skills

Application Requirements

＜MUST>

- Currently residing in Japan.

- 5+ years of experience in service development/operation using backend or web frontend frameworks

- High skill in at least one programming language (Java, JS, etc.)

- Knowledge and experience with cloud system (platform application) software and its development

- Communication skills in Japanese and English to correctly understand what others are saying and convey what you want to say. *However, Japanese is not required if English is spoken.

- Ability to read and write documents and conduct business conversation in English

Experience in the automotive industry: a plus

TOEIC: 600

＜**WANT>**

- Experience in Agile development

- Experience with Spring boot/node.js/react

- Experience in designing and operating backend servers and cloud systems

- Experience in development projects involving many stakeholders

TOEIC: 730

＜**The kind of person they are looking for>**

- Bright and positive

- Able to accept diverse cultures and ways of thinking and communicate proactively.

- A person who can identify, organize, and resolve issues on his/her own initiative.

- A person who can accomplish tasks by involving others.

- A person who is highly deadline oriented and can do his/her best to achieve results.

- A person who is highly adaptable to the work environment

- A person who can think logically and provide logical explanations.
