Job Description

Responsibilities:

- Product Development: Lead the development of SaaS applications leveraging Generative AI, large-scale language models (LLMs), and complex API integrations.
- Web Application Development: Build and maintain web applications with TypeScript, React, and Next.js for frontend, and Python for back-end, with a focus on scalability, performance, and maintainability.
- API Design & Integration: Design, implement, and integrate APIs, and contribute to projects that generate new APIs.
- Collaboration: Work with machine learning engineers, product managers, and quality assurance teams to deliver
 effective solutions.
- Continuous Improvement: Contribute to process improvements and strategic initiatives to enhance engineering
 productivity, code quality, and team happiness.

Required Skills:

- 3+ years of experience in developing and maintaining user-facing web applications.
- Strong coding skills in JavaScript/TypeScript, with familiarity in other OOP languages such as Python or Java.
- Experience with ReactJS, Next.js, HTML, and CSS for front-end development.
- Familiarity with back-end frameworks such as Node.js, Express, FastAPI, or Django.
- Experience with unit and integration testing (e.g., Jest, Cypress).
- Understanding of relational databases and basic database concepts.

Nice-to-Have Skills:

- Knowledge of cloud technologies (AWS, GCP, Azure) and DevOps practices (containerization, CI/CD).
- Experience with API design, architecture best practices, and performance optimizations.
- Understanding of security principles (e.g., IAM, data access, web app vulnerabilities).
- Interest or experience in the Al domain, especially working with Generative Al or LLMs.
- Proficiency in Japanese language is a plus.

Development Environment:

- Front-end: TypeScript, ReactJS, Next.js
- . Back-end: Python, Node.js
- Cloud Infrastructure: GCP, GPU cloud services
- Tools: Slack, Confluence, Jira, GitHub, Google Workspace
