Job Description

[About the company]

Our client is a leading technology company known for its innovative approach to online services and commitment to cutting-edge infrastructure. They offer a collaborative and fast-paced work environment focused on continuous learning and development.

[Role & Responsibilities]

As a Load Balancer Platform Architect, you will be at the forefront of designing and developing next-generation load balancing infrastructure. You will drive architectural decisions, ensuring high availability, scalability, and efficiency across our global data centers. You'll work with a talented team to automate processes, build robust APIs, and tackle complex challenges in a dynamic environment. This is an opportunity to make a significant impact on a massive scale.

[Main tasks include]

- Lead the architectural design of the load balancer platform control plane.
 - Develop and implement automation strategies to streamline operations.
 - Design and develop high-performance Web APIs.
 - Collaborate with engineers across multiple teams.
-

Required Skills

- 3+ years of experience in API development using Go-lang.
 - Solid understanding of networking principles (DNS, TCP/UDP) and troubleshooting skills.
 - Experience with NoSQL databases (Cassandra, Redis).
 - Experience in a collaborative team environment.
 - Understanding of Linux fundamentals.
 - Experience with automation tools (Ansible is a plus).
 - Experience with monitoring tools (Prometheus and ELK are a plus).
 - Familiarity with networking protocols (BGP, HTTP, TLS, DNS is a plus).
 - Experience with test-driven development (TDD) is a plus.
 - Experience with other programming languages (Python, Ruby) is a plus.
-
