Job Description

A lead-level engineering opportunity focused on rebuilding logistics and transportation systems through advanced technologies and Agile practices. You will lead development teams and own technical design, ensuring high quality and performance across full-stack and mobile applications.

Client Details

A major enterprise group in Japan with a global footprint, known for its innovation in e-commerce, logistics, fintech, and digital services. This position supports their logistics business by driving system innovation and efficiency.

Description

- Lead a team of developers and promote Agile methodology through daily Scrum practices
- Oversee technical design and execution across front-end, back-end, and mobile platforms
- Ensure code quality through code reviews, testing, and documentation
- Collaborate with stakeholders to translate business goals into technical specifications

- Manage integration, deployment, and monitoring of applications using CI/CD pipelines

Job Offer

- Long-term renewable haken contract
- Potential to convert to permanent employee in the future
- Competitive salary
- Attractive benefits
- International work environment
- Flexible work arrangements and remote work options
- Work hours: 9:00-17:30, Monday to Friday

To apply online please click the 'Apply' button below. For a confidential discussion about this role please contact Hikari Takamura on +813 6832 8903.

Required Skills

- Strong experience leading Agile development teams
- Proficient in Java, React, Android SDK, Spring Framework, RESTful APIs
- Hands-on experience with SQL and NoSQL (e.g., Redis)
- Familiarity with Jenkins, SonarQube, and testing tools such as JUnit or Jest
- Skilled in using JIRA and Confluence for documentation and project tracking

Company Description

A major enterprise group in Japan with a global footprint, known for its innovation in e-commerce, logistics, fintech, and digital services. This position supports their logistics business by driving system innovation and efficiency.
