### Job Description

Our client is an industry leader in innovative memory and storage solutions, transforming how the world uses information to enrich life for all. With a relentless focus on customers, technology leadership, manufacturing, and operational excellence, our client aims to be instrumental in serving customers while ensuring they attract and retain the highest-quality talents.

### Responsibilities

- Oversees all engineering activities in semiconductor component assembly equipment and process engineering of product manufacturing area
- Plans and directs implementation of equipment and process modifications to improve production efficiencies, manufacturing techniques and production yields for existing products.
- Acts as engineering liaison with product design and development to ensure processes and designs are compatible.
- Selects, develops, and evaluates personnel to ensure the efficient operation of the function.

- Ensure the production equipment is in control and quality/reliability of product meets expectation
- Sustain and improve the key performance indices of the equipment through continuous improvement activities/projects
- Reduce cost through continuous cost reduction effort

#### **Requirements**

- Min Bachelor's degree in Engineering or a related field
- Minimum of 20 years of experience in a manufacturing equipment and process engineering role
- Demonstrated experience in improving production efficiencies and successfully implementing process modifications.
- Strong leadership skills with the ability to develop and motivate a team to achieve ambitious goals
- Outstanding problem-solving abilities and experience in planning and directing process modifications
- Excellent communication skills to effectively collaborate with cross-functional teams
- This role is based in India.
