Job Description

■Recruitment background
This team is mainly responsible for the development and operation of customer applications for smartphones, and customer application for desktop PCs, . These applications are used by a total of more than 1 million unique users and are widely supported by individual investors.

"Server Side Engineer" we are recruiting will be responsible for the development, operation, and maintenance of the back-end system that supports these applications. This position requires the construction and operation of a low-latency, high-performance back-end system. We are looking for highly motivated individuals who can continue to meet high-level user demands and create SBI Securities' next-generation financial services together.

■Job OverviewYou will be
mainly responsible for the entire development process from requirements definition to operation for SBI Securities'
smartphone applications for individual investors, a desktop application for large individual investors. Users of these
applications frequently refer to market trends and tend to place orders daily, so customers have high expectations for the
apps and we still receive many requests for improvements. We will manage the backlog based on such customer feedback
and continuously make improvements to increase customer satisfaction.
