Job Description

【 About the company 】

It is a global online financial services group with retail online brokerage operations in Japan, the United States, China (including Hong Kong), and Australia, as well as a wide range of businesses and services including global FX, asset management, investment education, and M&A advisory services.

The group's goal is to create a new type of comprehensive institution for a new era, centered on a crypto asset bank function and a securities function connected to the global financial market, by utilizing Coincheck's functions to buy, sell, and hold virtual currencies, a new payment function using virtual currencies, and various experiences and technologies accumulated

through its online securities businesses in Japan, the United States, China, and Australia.

【 Job Description 】

【Your Role】
The company released its own securities core system in 2017, which it developed and operates in-house, a unique feature among online securities firms.
Since the company has a team for all aspects of systems, including infrastructure, its strength lies in its ability to develop systems in a single integrated manner, working closely with the product and customer service departments.
The company is looking for a server-side engineer who can take charge of the future in order to shift to more complete in-house production, as they are currently proceeding with this with the cooperation of vendors.

【Responsibilities】
Development of in-house securities core system "GALAXY" and related systems (basic design, detailed design, programming, and testing)
System development mainly in Java
※Depending on the project, you may be entrusted with the definition of requirements as well.
※Depending on your preference and experience, you may be entrusted with management responsibilities.

【Environment】
Web server side: Java 8, C++, PL/SQL
Database: Oracle
Development environment: Eclipse, Tomcat
Production environment: Linux, JP1
Administration: Jira, Confluence
Document management: SVN
Source control: Git
Communication: Tools: Slack, zoom, Google chat meet

【Attraction of this position】
Because they develop their own systems, they can develop systems to provide better services to their users.
The company has a flat corporate culture that does not resemble a financial institution, so you will be able to actively reflect your own ideas and thoughts in your work.
Many of the engineers are mid-career hires, so you will be able to collaborate with members from a variety of backgrounds.
In order to realize a flexible development system, they are also considering the next generation system. Currently, they are mainly using Java, but there is a possibility to gain experience in a wider range of financial systems in the future.

【 Working conditions 】

■Holiday
Annual paid leave (2~10 days granted depending on month of hire/ 11~20 days granted after the next year depending on years of service)
Consecutive vacations (5 consecutive days can be taken at any time of the year)
Birthday leave (one day can be taken within the month of birth)
Long service leave (5 days are granted for every 5 years of service/ Can be taken at any time of the year)
Celebration or condolence leave, menstrual leave, jury leave
Marriage, maternity leave, spousal maternity leave
Childcare leave, shortened working hours for childcare, child nursing care leave
Nursing care leave, shortened working hours for nursing care

Self-study support (qualification acquisition support system up to 500,000 yen, Udemy, online English conversation, flier)
Various congratulatory and condolence payments (marriage, childbirth, injury, illness, etc.)
Monex is expanding the concept of "spouse" and promoting diversity.
Human Resources Strategy, Work Styles, and D&I Received the highest rank in the PRIDE Index 2021
Discounts at fitness clubs and leisure facilities
No dress code
Club activity system
No smoking in the office (smoking room available in the building)

Required Skills

【Required】
Experience in Java development (3+ years)
Experience in development with open systems and web application systems
Japanese: Business level (N1)

【Preferred】
Experience developing securities systems using Java and SQL
Experience in development using frameworks such as Spring
Experience in development using Linux
