Job Description

Job Description:

We are seeking a highly skilled Embedded Engineer with expertise in ECU-related software development to join our team. The ideal candidate will have a strong background in embedded systems, microcontrollers, and automotive software development processes.

Key Responsibilities:

- Develop and maintain embedded software for ECU systems, primarily focusing on EV/AC controllers.
- Collaborate with customers to define software requirements and ensure alignment with project goals.
- Lead and manage team member activities, including task estimation, planning, and software reviews.
- Monitor project progress, identify potential issues, and report to the manager.
- Engage in discussions with customers and Japanese engineers to resolve development challenges.
- Investigate and troubleshoot problems during customer development, working closely with the customer to identify root causes.
- Train and mentor subordinates, fostering a collaborative learning environment.
- Ensure timely delivery of project tasks while maintaining high-quality standards.

Required Qualifications:

- Bachelor's or master's degree in computer engineering, Electrical Engineering, Electronics and Telecommunication, Mechatronics Engineering, or related fields.
 - Extensive knowledge of embedded systems and microcontrollers.
 - Proficiency in MATLAB/Simulink for model-based design and simulation.
 - Familiarity with software development processes, including V-model and Agile lifecycle methodologies.
-
