Job Description

*This position is available only for people residing in Japan

[Company Overview]

They develop and deploy a cloud-based electronic medical record and receipt system.

To realize "improvements in the medical industry," they are developing a cloud-based electronic medical record and receipt system called "Henry." They operate in an area called vertical SaaS.

Their main target is small and medium-sized hospitals, but they also provide services to clinics such as ophthalmology, pediatrics, and psychiatry.

[Attractiveness of the Company/Job]

Many of the initial members are from tech startups such as Wantedly and TeamLab, and they develop in a modern

development environment.

Since there are no layers and there is a lot of discretion, they can work on the development of all technical layers.

[Job Description]

You will be responsible for developing applications for their company's product, a cloud-based electronic medical record with integrated medical receipt system.

They will model the complex medical fee system and work together with medical professionals to create a service that is easy to use through the following tasks.

- Server development in Kotlin
- Development of microservices using gRPC
- Development of modern web applications in React
- Development of new features and continuous improvement linked to objective information such as KPIs and user feedback

[Attractiveness]

Many of the initial members are from tech startups such as Wantedly and TeamLab, and development is done in a modern development environment.

Since there are no layers and there is a lot of discretion, you can work on the development of all technical layers.

Many new developments are expected over the next three years, and in addition to continuous function improvements, you will be involved in the development of many new products.

- Requirement[Requirements]
- 4+ years of practical experience developing web applications
 - Development experience using statically typed languages such as Kotlin/Java
 - Front-end development experience using TypeScript and front-end frameworks
 - Domain modeling/design skills
 - Basic knowledge of data structures, security, and networks
 - Japanese ability: Business (N1)

[Preferred requirements]

- Experience in domain design of complex systems such as finance and medicine
- Ability to quickly catch up with new technologies and unknown areas
- Project/product management experience
- Experience in publishing and contributing to OSS
