Job Description

[ABOUT THE COMPANY]

Sale of safe foods and food ingredients, such as organic vegetables, specially cultivated agricultural products, and additive-free processed foods, to the general public through websites and catalogs.

In 2017, two companies merged their businesses, and in 2018, another company was added to create a group. The company is taking a leap forward in a sustainable society by providing a service that allows many people to enjoy a better diet and by creating a system that rewards and makes producers of good food proud.

The company's main business area is a value-propositioned food e-commerce business, such as meal kits that meet the needs of busy customers, such as organic and specially cultivated fresh food, processed food with minimal additives, and other products that are safe and secure. In addition, they are solving social issues related to food through our business, such as wholesale of foodstuffs to nursery schools, consulting and media business using our e-commerce know-how, and mobile supermarkets that serve as infrastructure for living in depopulated areas.

Now that the company has entered its second decade of business, it will continue to provide a better dietary life for producers and customers through new initiatives and tricks, such as strengthening the products and services of each brand, establishing a new large-scale distribution center, and building a logistics system.

【JOB DESCRIPTION】

【Responsibilities】

Currently, the team is focusing on improving the customer-oriented UI/UX while developing functions that are not yet available in the iOS application. In addition, to improve productivity, the team is refactoring the code base that has been accumulated over the past 10 years to a VIPER-based architecture to improve quality.

You will be mainly responsible for the following tasks: - Refactoring and process improvement for high-quality and easy-to-maintain iOS apps.

- Refactoring and process improvement for high quality and easy-to-maintain iOS apps
- Proposing and implementing measures to take advantage of Apple's platform
- Developing new features and optimizing UI/UX while communicating primarily with engineering managers Optimize performance and memory management
- Ongoing code reviews to fix bugs and improve performance
- Evaluate and introduce new technologies
- Prepare and propose documentation related to the above

【Technical Environment】

- Language: Swift
- UI Implementation: UIKit (with some Storyboard usage)
- Architecture: VIPER-based (Layered Architecture, Repository Pattern, Multi-Module structure via SPM)
- IDE: Xcode, with other choices available
- Issue Management: GitHub, Backlog
- CI/CD: Bitrise, GitHub Actions, fastlane, Firebase App Distribution, TestFlight
- Communication: Slack, Backlog
- Other: Kotlin Multiplatform (currently being partially introduced for testing)

【Recruitment Background】

The company provides home delivery of carefully selected food ingredients and meal kits using a subscription-based business model based on the theme of solving social issues in food through technology and business. It is unique in that it handles all inventory management, delivery and logistics, and e-commerce sites to connect producers and buyers. Its flagship service has been in operation for more than 20 years and is used by approximately 400,000 customers. The company is looking for people who are willing to work to create new value and eliminate technical debt in order to deliver an even better shopping experience to the customers.

■Developing iOS apps for a business that boasts sales of 60 billion yen

The service has both a web version and a native version (iOS and Android), of which the iOS app started to be released in 2015 and currently boasts annual sales of several tens of billions of yen. In addition, compared to the web version, some functions have not been implemented, and compared to the Android application, the so-called technical debt has not been resolved yet, and the iOS application has the largest room for improvement. While aiming to expand the functions that are lacking, we are also exploring ways to provide value unique to iOS applications.

*From sales results for the fiscal year ending March 31, 2023
