Job Description

【About the Company】

Thoroughly sticking to communication
 This is the pride of the company group.

The company's goal is not only to always respond sincerely to the feelings and requests of the users beyond the service, but also to provide value that exceeds the users' imagination and expectations through its "communication services".

"Changing the world in vivid ways through communication."

That is the mission of the company group.

Based on this definition, the company will concentrate its management resources on areas where it believes there is significant growth potential based on the value of communication and develop new businesses.

[About the Job...]

[About the Service]

Launched in June 2020, TIPSTAR is a social sports betting service where users can enjoy online betting on KEIRIN (bicycle racing), PIST6 (indoor track cycling), and auto racing.

It allows even those unfamiliar with KEIRIN and auto racing to enjoy the excitement with friends and other users through features like "Ride Bet," where you can easily place bets by following friends or other users, a free-to-play Medal Bet system, and engaging missions with game-like elements.

Through its social features, the service aims to create an environment where users can get enthusiastically involved with their friends and companions, rather than participating alone.

[Mission of this Position]

The mission is to develop and operate the server-side application and manage the infrastructure for the service.

Additionally, as a Server-Side Engineer, they would like you to maximize the product value and take the lead on a project basis.

[Work Process / Example Tasks]

This division is composed of four groups, and this position belongs to the Development Group, Server Team. You will work on the following tasks while communicating with PdMs, business stakeholders, and designers belonging to other groups:

- Service design, business flow design
- Server-side application development
 - Architecture design
 - New feature development
 - Development during updates and events
- Infrastructure construction and operation using Google Cloud and AWS
- Communication with other professions
- Technical support in preparation for the mid- to long-term market (contribution to research and development and improvement of the development team's technical capabilities)

[What You Will Gain in this Position]

- You can challenge yourself to create value that doesn't yet exist in the market of public sports betting services, a market with fewer players.
- You will gain high market value capabilities such as large-scale infrastructure experience, development and operation, and incident response with a large user base.
- You can take on challenges in new feature development and various 0 to 1 concepts throughout the service to create new product value.
- As a lead engineer, you will have the opportunity to gain new career paths, such as not only technical leadership but also team leadership and potential transitions to EM (Engineering Manager) or PdM (Product Manager) in the future.

[Working hours]

Flextime System

[Benefits]

- Full Social Insurance
- Commuting Allowance
- Sick Childcare & Babysitter Support Program
- App Store & iTunes Card / Google Play Card Purchase Assistance
- Book Purchase Support
- Employee Stock Ownership Plan
- Various Congratulatory and Condolence Money (with eligibility conditions)
- Massage Room
- Influenza Vaccination
- Vacation and Rewards System
- Company-Wide General Meeting
- Social Gathering System
- Circle/Community System
- Lunch Support
- Fully Equipped Drink Bar
- In-House Cafe (BYRONBAY COFFEE)
- In-House Convenience Store

[Holidays]

Saturday/Sunday/National Holiday
 Annual Paid Leave
 New Year Holiday
 Parental Leave
 Nursing Care Leave

Required Skills

[Required]

- Experience in developing server-side applications using cloud services.
- Experience in building scalable systems that can withstand high loads.
- Cloud architecture design and DB base design.
- Infrastructure design, development, and operation experience.

[Preferred]

- Experience in developing server-side applications using Go.
- Development experience using NewSQL databases.
- Experience technically leading projects or teams as a lead engineer.
- Team management experience or a management-oriented mindset.
- Team development experience in Agile development.
