Job Description

Company Overview
A cutting-edge financial technology firm specializing in building and operating High-Frequency-Trading (HFT) systems that drive high-speed trading worldwide. This role is ideal for someone who's good with Python and passionate about automating processes, improving infrastructure, and building scalable tools to support mission-critical systems.

Key Responsibilities

- Develop and maintain Python scripts to automate infrastructure and system processes

- Optimize scripts for better performance, scalability, and reliability

- Build and improve CI/CD pipelines using relevant tools

- Automate cloud and on-premise infrastructure setup and monitoring

- Manage Linux systems and environments through automation

- Work with teammates to ensure system stability and smooth deployments

- Document code, processes, and best practices clearly

Key Requirements

- At least 3 years' experience writing professional-level Python scripts or applications

- Good knowledge and hands-on experience with Linux systems

- Able to debug and solve problems efficiently

- Familiarity with CI/CD tools (e.g. Jenkins, GitLab CI)

- Exposure to container tools like Docker

- Understanding of infrastructure automation

Benefits

- Competitive Salary

- Performance-based Bonuses

- Lifestyle Benefits (Transportation Allowance, Car Park Subsidy, and Meal Allowance)

- Relocation Support
