Job Description

Our client is a well-established multinational company involved in high tech manufacturing, known for its strong digitalisation and innovation. To support their ongoing internal transformation, they are looking for a skilled full stack developer to join the team and help build smart solutions that improve internal processes.

- Location to work: Selangor

- Hybrid Work

Job Description:

- Collaborate with internal stakeholders to design and develop web applications that solve real business problems

- Identify and automate manual or repetitive tasks through smart, scalable software solutions

- Research, explore and consider new ideas such as but not limited to blockchain and AI as potential solutions for web app design

- Evaluate the performance and usability of web tools, and propose improvements through data and user feedback

- Conduct regular system performance reviews and recommend enhancements – be it in code, architecture or hardware dependencies

Job Requirements:

- Bachelor Degree in Computer Science, Software Engineering, Mechatronics, Electronics or a related field technical field

- Proven experience in end-to-end web application development (frontend + backend)

- Solid knowledge of modern frameworks, libraries and cloud-based solutions (e.g: React, Node, js, Vue, Django, etc)

- Experienced in designing webtools to cater to internal or external business needs

- Able to explore and identify improvement opportunities in software design independently

- Up-to-date with the latest trends in open-source technology, security best practices and software architecture

- Great appreciation for good quality software design
