Job Description

Our client is leading provider of IT services with a focus on network computing and e-business, catering primarily to major enterprise clients, business executives in the public and private sectors.

Location: Bangkok.

Responsibilities:

- Examine requirements, design and develop features in accordance with the specifications for the product.
- Fully comprehend the product, find any issues and fix problems.
- Create both server-side and client-side architecture.
- Create and oversee functional databases and applications.
- Write code that is elegant, clean, high-quality, and maintainable.
- Write efficient APIs and create a unit test and test the working system's integration.
- Development-related build papers (data structure, specification).

Qualifications:

- Bachelor's degree in IT, Computer Science, Network Engineering, or related fields.
- At least 5 years of experience in Pre-Sales or technical consulting within Networking, Security and IT Infrastructure Layer.
- Have experience in IT Technical skills for troubleshooting and IT Service support.
- Good in English Communication.
