Job Description

COMPANY OVERVIEW

A leading organization in the financial services industry with a strong focus on digital transformation and data-driven decision making. The company is committed to building next-generation data platforms to power innovative products and deliver impactful insights to internal and external stakeholders.

JOB RESPONSIBILITIES

Key responsibilities include:

- Lead and drive the ingestion of new data sources into the enterprise data lake using scalable, secure mechanisms.
- Provide reliable and performant data access via supported consumption frameworks to internal business functions.
- Design, build, and maintain high-quality batch and real-time data pipelines to support new and existing digital

products.

- Understand the architecture of enterprise data platforms and drive improvements in structure, scalability, and performance.
- Incorporate non-functional requirements such as scalability, security, maintainability, and resilience into solution design.
- Ensure seamless cross-functional collaboration, effective handoffs, and adherence to delivery timelines.
- Participate in proof-of-concept (POC) efforts and support technical presentations to stakeholders and partners.
- Support hiring and onboarding of top-tier engineering talent; mentor and develop junior staff.
- Help establish a center of excellence through best practices, reusable frameworks, and standardized documentation.

JOB REQUIREMENTS

Experience & Technical Expertise:

- 15+ years of experience in the data engineering domain, with increasing leadership responsibilities.
- Proven experience in designing and supporting both streaming and batch ETL pipelines.
- Expertise in data modeling, large-scale distributed data systems, and modern data architectures.
- Experience with distributed computing frameworks (Spark, Hadoop), stream processing (Kafka), and NoSQL/SQL databases.
- Hands-on experience with at least one major cloud platform (AWS, GCP, Azure).
- Strong programming background in languages such as Python, Java, or Scala.
- Familiarity with technologies like Databricks, Hive, Presto, Cassandra, and modern data lake architectures.
- Hands-on experience with data warehousing concepts and tools.

Soft Skills & Leadership:

- Strong communication and presentation skills, including the ability to interact with C-level stakeholders.
- Demonstrated success managing cross-functional technical teams and concurrent delivery streams.
- Experience in hiring, mentoring, and building engineering teams.
- High level of ownership, organizational skills, and the ability to prioritize competing demands.

Preferred:

- Experience in the banking, fintech, or consulting sectors is highly advantageous.

BENEFITS

- Competitive compensation package, performance-based bonuses
- Flexible hybrid working model
- Health and wellness benefits
- Opportunity to lead high-impact projects with regional and global exposure
- Access to learning and development programs
- Collaborative and innovative work environment
