### Job Description

You will be responsible for formulating and executing QA strategies for the HR Product Development Department, with a focus on process improvement from upstream to downstream.

- Management of the QA organisation, including recruitment and training (location: Japan)
- · Establishment and promotion of a development process improvement team for quality assurance
- Collection, measurement, analysis, and consideration of countermeasures for defect data using metrics for continuous quality improvement
- Standardisation or process improvement of development and testing processes
- Improvement and promotion of shift left and Al-enabled quality assurance processes
- · Establishment of quality strategies appropriate for an HR organisation and negotiation with stakeholders

### Required Skills

### Required Skills and Experience

- 3+ years organisational management experience
- Experience managing teams of 5 or more members
- · Experience in developing and implementing test strategies with an awareness of QCD (Quality Cost Delivery)
- · QA experience for HR or similar Product Development
- · Experience in negotiating with stakeholders (PdM side, development side), including the business side
- Collection, measurement, analysis, and consideration of countermeasures for defect data for continuous quality improvement
- Standardisation of development processes/testing processes
- 3+ years of development experience, or 3+ years of experience in test automation using scripting languages
- Bachelor's degree in information processing or computer science, or equivalent knowledge (Basic Information Technology Examination, etc.)

#### Preferred Skills and Experience

- Experience in establishing a QA organisation from scratch
- Experience in improving QA approaches using AI tools or experience in AI development
- Experience working in a global environment spanning multiple countries (in the HR Product Development Department, you will work with members from Vietnam and India)
- Experience in introducing, building, and maintaining CI/CD environments and test automation using automation frameworks
- A sense of responsibility to commit to product quality and the perseverance to see things through even in difficult situations
- . Those interested in a new era of QA strategy centred on shift left

### Language Requirements

- Japanese language skills: Basic
- English language skills: Business level (TOEIC 700 points or equivalent)
  - For meetings conducted in Japanese, an interpreter will be provided.
