Job Description

The Job Duties

- We are seeking Full Stack Developer to join our outsourcing projects for Japanese clients who:
 - Design, develop, and optimize backend services using Python (FastAPI) within a Microservices architecture.
 - Analyze business requirements and translate them into robust and maintainable technical designs following Clean Architecture principles.
 - Take technical ownership of assigned modules; perform code reviews, mentor junior developers, and ensure code quality and best practices.
 - Collaborate cross-functionally with Frontend, QA, and Test teams to deliver and maintain reliable, scalable systems.
 - Write and maintain technical documentation, including API docs and system architecture notes.

Your Skills and Experience

- 5+ years of software development experience with Python programming languages, with proven experience building production-grade systems using FastAPI, Flask, Django...
- Experience developing distributed systems using microservices architecture, serverless architecture, and event-driven architecture
- Strong database and schema design skills for large-scale applications.
- Strong understanding of software engineering principles, such as Clean Architecture, SOLID principles, and common design patterns
- Strong problem-solving and document skills.

Plus point:

- Familiar with unit testing, integration testing and CI/CD (GitLab CI, GitHub Actions,...)
- Experience with client-side frameworks and libraries that interact with server-side APIs such as React, Angular, Vue.js, Svelte, TypeScript, etc.
- Exposure to AI/ML technologies
- Experience with AWS
