Job Description

COMPANY OVERVIEW

My client is a well-established Swiss-based wealth management group known for its client-centric approach and long-term relationship focus, the firm offers personalized advisory services through an open product platform. It maintains a strong financial foundation and entrepreneurial culture, positioning itself as a global reference in private banking and investment advisory.

JOB RESPONSIBILITIES

Collaborate with cross-functional teams to design, develop, and implement high-quality software solutions for financial products and services.

Develop and maintain backend services and APIs using Java, Spring, and Spring Boot.

Optimize server-side performance and ensure data integrity and security.

Integrate various financial systems and third-party services to ensure smooth data flow and interoperability.

Write clean, maintainable, and efficient code following industry best practices, including code reviews, testing, and CI/CD workflows.

Diagnose and resolve technical issues across the stack, supporting both development and production environments.

Work closely with product managers, designers, and other stakeholders to gather requirements and translate them into technical deliverables.

Participate actively in Program Increment (PI) planning processes within GPS.

Support change management and release rollout planning.

Provide dedicated post-implementation support locally in Asia.

JOB REQUIREMENTS

Able to work independently and in a global team setup to take on initiatives with a positive attitude.

Have a passion for developing high quality software. Client-centric approach for all deliverables.

Solution oriented and able to work in an agile setup.

Able to quickly troubleshoot problems and provide effective solutions.

Fast learner and able to work under pressure to meet tight deadlines.

Good communication/coordination skills to deal with different levels of stakeholders.

Strong analytical skills, able to structure and document requirements and solution options.

Technical Skills

Profound hands-on Java programming skills.

Good knowledge of core Java & related utilities/libraries, particularly collections, JSON, JDBC, Maven.

Good knowledge of Spring Framework including Spring Boot, JDBC templates and JPA, Messaging and JMS.

Basic understanding of Unix Operating system and bash scripting

Good code review skills, and pride in code quality.
