Job Description

COMPANY OVERVIEW

Our client is looking for the FLEXSIM Engineer position.

Flexsim is an advanced 3D simulation software used to simulate and optimize manufacturing processes, logistics, warehouse management and operational systems in a variety of industries. It allows simulation of different scenarios, helping businesses analyze, improve performance, reduce waste and optimize productivity.

JOB RESPONSIBILITIES

- We are looking for candidates who can use Flexsim software to simulate, analyze and optimize operating processes in factories and production systems.
- Build simulation models on Flexsim software to analyze production performance.
- Design, test and evaluate simulation scenarios to optimize productivity and minimize operating costs.

- Collect real data, set up simulation models corresponding to the actual system of the enterprise.
- Cooperate with engineering and production departments to improve processes and propose optimal solutions.
- Visualize simulation data with 3D models to support decision making.

JOB REQUIREMENTS

- Experience using Flexsim software to simulate production, logistics or warehouse systems.
- University degree in: Industrial Engineering, Mechanics, Production Systems, Information Technology, Automation, Logistics or related fields.
- Foreign language: English from Toeic 600 or equivalent.
- Understanding of production process modeling, supply chain management, operating system optimization.
- Good data analysis, logical thinking and problem solving skills.
- Priority is given to candidates with experience in Digital Twin, AI, Data Analytics, and production optimization.
- Good communication and teamwork skills.

BENEFITS

- Benefits: Salary Review, 13th month salary, Company performance Bonus, Travel Opportunity, Training & Development, Lunch Support, Transportation Support
- Interview: Onsite interview (face to face)
- CVs submission in English
- Only selected candidates will be contacted for the interview.
