Job Description

Our client a digital engineering hub focused on building advanced technology solutions that power large-scale digital transformation. Their teams specialize in cloud architecture, AI, data engineering, blockchain, and system security—creating scalable platforms that enhance business performance and operational efficiency.

Our client is seeking a talented **Data Scientist** to design and deploy AI-driven solutions that power data-informed decision-making. In this role, you'll build scalable data pipelines, develop predictive models, and collaborate with cross-functional teams to integrate analytics and machine learning into business operations. You'll also champion best practices in data quality, governance, and ethical AI.

Key Responsibilities

- Design, develop, and maintain data pipelines for structured and unstructured data sources.
 - Work with engineering and business teams to identify and prioritize data use cases.
 - Build, validate, and deploy predictive and machine learning models at scale.
 - Conduct exploratory data analysis and translate findings into actionable insights.
 - Ensure data quality, integrity, and governance across systems and platforms.
 - Implement scalable solutions using cloud-based and big data technologies.
 - Monitor model performance and perform retraining to maintain accuracy.
 - Document data workflows, modeling approaches, and technical decisions.
 - Promote responsible AI practices and support data security and compliance initiatives.
-

Required Skills

Qualifications:

- At least **4 years of professional experience** in **AI system development**, including the design, implementation, and deployment of **AI-driven solutions** addressing real-world business challenges
 - Proficiency in **Python** or **Rust**
 - Hands-on experience with **Git** for version control
 - Familiarity with **Docker** for containerization
 - Experience working with **cloud platforms** (preferably **Microsoft Azure**)
 - Practical experience with **Large Language Models (LLMs)** and **Agentic AI systems**
 - Experience deploying and managing **MCP (Model Control Plane)** servers or similar **AI infrastructure**
 - Ability to manage both **development** and **maintenance** tasks effectively
 - Strong **problem-solving skills** and adaptability in dynamic environments
 - Excellent **communication** and **collaboration** skills across cross-functional teams
 - **Fluent Japanese** (JLPT N1 or above) and **business level English** (TOEIC 800+)
-
