Job Description

【求人No NJB2345288】
■Job Description:
Business Overview
Rakuten is one of the leading e commerce companies in the world. Our mission is to empower people and society through the internet while aiming at becoming the Global Innovation Company.

■Department Overview
The Global Ad Technology Department（GATD）manages the whole of the advertising systems that power Rakuten. We are a cross functional and data driven organization working together in a diverse team spread across 4 countries: Japan Singapore India and China.
GATD Website:
https://corp.rakuten.co.jp/careers/feature/adtech/en/

Our vision is to empower our internal and external stakeholders by providing data driven marketing solutions by developing the AD delivery Tracking Reporting and Data Sync Platforms. Joining us you will be able to challenge yourself in a wide range of technologies in the frontline of heavy traffic large scale ad applications and platforms including high performance system development and big data processing systems.
Our group is responsible for building and maintaining the technology and infrastructure that powers advertising activities within the Rakuten environment and externally. We are not just running ads; we are building the platforms that enable Rakuten and its partners to run ads and marketing activities.

■Position Details
You as a Software Engineer in the team will be required strong direct marketing insight across multiple marketing channels as well as strong technical knowledge to implement user story into the platform and support marketing activity quickly and efficiently.

■Responsibilities
Your main responsibility will be development and maintenance of Data Management Platform understanding both business demand and available system assets.

Involved in whole process of web application and data pipeline development life cycle: architecture design middleware selection development configuration setting release and system operation
In case of trouble detecting root cause and recovering with team members proactively with ownership of service/system
Proposing new technologies middle wares tools etc. to improve architecture of systems

Required Skills

■Mandatory Qualifications:
More than 3 years of professional experience on web / data pipeline application development
Development experience on Java Scala and Web application frameworks such as Spring Boot
Experience on Linux operation system
Familiar with various OSS and able to investigate evaluate and adopt it to the system

■Desired Qualifications:
Practical knowledge of system performance tuning including OS middleware JVM and application
Familiar with container deployment setting（Docker k8s Jenkins）
Experience of Frontend development with TypeScript React Material UI
Experience of data processing with Hive Spark Kafka
Familiar with cloud platforms such as GCP AWS and Azure
Contributing to OSS community
