Job Description

Background

As part of the global digital transformation initiative, the Japan business is replacing legacy customer databases with brand new, open source systems developed in house. The new systems will have a material impact on system performance, internal operations and customer/client services.

Your Role is to analyse and document the existing legacy databases and design a new open source solution to fully update the entire back end systems of the company.

- Analyse existing databases for customer/client data and map data flows to business processes
 - Design and develop new open source data architecture
 - Build new database systems in collaboration with internal development team
 - Plan and Implement data migration to new system
 - Collaborate with third party system providers to build new APIs for smooth migration and cutover
-

Required Skills

- Strong experience in Legacy Data Platforms such as MS Access, SQL Server or Oracle
 - ETL/Datawarehousing experience highly advantageous
 - Business Level English & Japanese
-
