Job Description

Our client is a Japan-based mobility tech start up that provides telematics hardware and data platforms to collect and analyze vehicle data, enabling businesses to improve fleet management, safety, and operational efficiency.

The role primarily involves developing and operating API servers using Golang or Ruby/Ruby on Rails, as well as building and maintaining various asynchronous processing components.

Required Skills

- Proficiency in Golang or Ruby on Rails
- At least two years of experience developing and operating RESTful APIs, including managing their documentation
- Solid understanding of the OSI application layer (e.g., HTTP).
- Business level Japanese. The company mainly uses Japanese for daily work and documentation.
