### Job Description

#### ■ About the role

## ■ About the role

We're looking for a **Cloud / DevOps Engineer** who loves the intersection of code, automation, and cloud infrastructure, someone whose DNA naturally treats reliability and security as the same. You'll architect and operate highly available AWS environments, automate workflows from deployment to compliance, and help shape our DevOps culture.

## ■ About Us

Our company is a startup founded in 2023 by two CEOs who both come from major global automotive manufacturers. We focus on battery-related research and development, the provision of technical know-how, and consulting services for client companies.

With offices in Japan and Germany, we are building a diverse, international team. We operate as a global startup with two core business pillars:

- a chat-based AI software business that enables easy access to essential information for battery development, and
- a joint development service for next-generation batteries.

Guided by our mission, “**Transform inefficiency and create the future for the next generation,**” we continuously explore new technologies and work toward a better future for people and the planet.

## ■ Employment Type

Full-time employee

Probation period applies (no change in employment conditions during the probation period).

## ■ Compensation

Annual salary: **JPY 8,000,000** – (Manager level, depending on experience and skills)

## ■ Working Hours

Flexible working hours system

- No core hours
- Standard working hours: 9:00–18:00 (60-minute break)

## ■ Location

Shin-Otemachi Building 3F, Oclub  
2-2-1 Otemachi, Chiyoda-ku, Tokyo

Directly connected to the station — commute without an umbrella even on rainy days.

Plenty of restaurants nearby, making lunch options abundant.

## ■ Holidays & Leave

- Saturdays, Sundays, and national holidays
- Summer vacation
- Year-end and New Year holidays
- Paid annual leave (granted after 6 months of employment)

## ■ Benefits & Perks

- Full social insurance coverage (employment, workers' compensation, health, and pension)
- Remote work options available
- Bonus system: available
- Retirement allowance: not available
- Casual dress code
- Transportation allowance

- Annual health checkups
- Stock options

---

## Required Skills

### «What you'll do»

- Design, build, and maintain secure, scalable AWS infrastructures using best practices.
- Create and manage Infrastructure as Code with Terraform for consistent, repeatable deployments.
- Engineer automated CI/CD pipelines with built-in testing, security scanning, and release controls.
- Implement backup, disaster recovery, and forensic strategies for business continuity.
- Lead efforts around GDPR, ISO 27001, and EU AI Act compliance through automation and documentation.
- Optimize cloud performance and costs through monitoring, metrics, and fine-tuning.
- Apply robust security principles across systems, code, and networks.
- Develop dashboards and alerting systems to drive visibility, reliability, and proactive operations.

### «What you'll bring»

- Proven experience as a Cloud, DevOps, or Platform Engineer in production environments.
- Deep AWS expertise with a strong grasp of services, architecture, and cost optimization.
- Advanced Terraform skills (modules, remote backends, state management).
- Strong background in Linux systems and scripting (Bash, Python).
- Solid understanding of security best practices in cloud and web environments.
- Experience working with ISO 27001 or comparable security and compliance frameworks.
- Hands-on experience with containers (Docker, EKS/ECS).
