A Global IT Service firm is seeking a **Platform Software Engineer** to Drive the architecture and development of its highly scalable load balancer platform, ensuring reliable and efficient traffic routing across global data centers.

Responsibilities:
- API development and its release operations
- Automating load balancer platform
- Trouble shooting on network, Linux and applications
- Management of Linux server

Why should you apply:
- This is a long-term opportunity with a chance to become a permanent employee
- You will be working with international team members
- Free breakfast, lunch and dinner at the cafeteria

Company Details:
A global company with a strong presence in multiple business areas. It has achieved sustained growth both domestically and internationally, including in the U.S. and Europe. The company boasts a diverse and international environment and is committed to equal opportunity, offering a wealth of career opportunities. Due to the diverse nature of our business, we handle a wide range of technologies! You can also choose the environment you are most comfortable with, such as Windows/Mac! Meals in the company cafeteria are also free. Our chefs are always coming up with new menu items, so you can enjoy your meal without getting bored!
Services/Benefits: Social insurance, DC Pension Plan, Transportation Fee, Skillhouse University, Test payback system, and more

---

Required Skills

- Strong Linux understanding
- Strong understanding of networking and web protocols (TCP, HTTP, TLS, DNS, BGP)
- API development experience
- General understanding of datacenter compute and network design
- Ability to take a systematic approach to do troubleshooting
- Experience in a team-based collaborative environment

Company Description
