Job Description

As an AI Project Manager in the technology industry, you will oversee the planning and execution of AI-related projects, ensuring they are delivered on time and meet quality standards. This role requires a strong technical background, excellent organizational skills, and a passion for innovation.

Client Details

The employer is a large organization recognized for its contributions to the technology and telecoms sectors. The company is dedicated to advancing cutting-edge solutions and fostering innovation in a collaborative environment.

Description

- Manage AI projects from initiation to completion, ensuring timely delivery and quality outcomes.
- Coordinate with cross-functional teams to align project goals with organizational objectives.
- Analyze project requirements and develop detailed plans to achieve success.
- Monitor project progress and address any challenges that arise.
- Maintain clear communication with stakeholders to provide updates and gather feedback.
- Ensure compliance with industry standards and best practices in AI development.
- Identify opportunities for process improvements and implement effective solutions.

- Prepare reports and documentation to support project transparency and accountability.

Job Offer

- Competitive annual salary ranging from up to JPY11,000,000
- Opportunities to work on innovative AI projects in the technology industry.
- Comprehensive benefits package to support your well-being.
- A collaborative and forward-thinking work environment.

If you are passionate about AI and want to make an impact in the technology industry, we encourage you to apply for this position!

Required Skills

A successful AI Project Manager should have:

- A strong understanding of AI technologies and their applications in the technology industry.
- Proven experience in project management within a technology-focused environment.
- Excellent organizational and multitasking abilities.
- Strong communication and stakeholder management skills.
- A proactive approach to problem-solving and decision-making.
- Knowledge of relevant tools and methodologies for project planning and execution.
- A degree in a relevant field, such as Computer Science or Engineering.
