## Job Description

### Company Overview

A company in the office equipment and systems industry is hiring BrSE (C++)

### Job Description

- Develop dedicated embedded software to control multifunction printers and related optional devices.
- Conduct debugging and evaluation using actual hardware devices and software simulators.
- Coordinate closely with external business partners, acting as a bridge engineer between teams.
- Understand and clarify technical requirements through communication conducted in Japanese.

- Report development progress clearly and consistently to stakeholders.
- Explain specifications, design intent, and response plans to business partners to ensure product quality.
- Provide accurate translation and communication that respects local official languages and cultural practices.

#### **Job Requirements**

- Experience in software development using any programming language, or experience participating in projects as a bridge software engineer.
- Development experience in C or C++.
- Experience with embedded software development.
- Experience creating specifications or requirements documents in Japanese.
- Experience working in Windows and Linux development environments.
- Japanese language proficiency at N2 level or above, with strong speaking, listening, and writing skills.
- English language proficiency with the ability to speak, listen, and write effectively.
- Strong communication skills and a cooperative approach to working with colleagues and supervisors.
- Interest in long-term professional growth and commitment within the organization.
- Bachelor's degree in a computer science-related field or equivalent practical experience.
- Relevant technical certifications.
