### Job Description

Our client is a manufacturing company for household products which focuses on 3 core technological competencies: precision mold design, advanced material application development, and innovative injection molding techniques. Their Sg Petani facility embodies a fusion of traditional manufacturing excellence with modern smart technologies delivering high-quality production solutions from R&D stage through to final product realization.

**Job Descriptions**

- Develop and optimize equipment management systems and processes, establish asset ledgers and inventory control mechanisms to improve equipment utilization, promote automation implementation, and drive energy saving and efficiency-enhancing initiatives.
- Coordinate equipment resources based on production plans, supervise and verify the equipment status proactively to ensure meet the production scheduling and smooth operation.
- Formulate and supervise preventive maintenance schedules and ensure stable and efficient operation of the equipment.
- Evaluate regularly the compatibility of existing equipment with production processes, formulate effective and develop feasible transformation plans for equipment, track implementation, optimize processes, and reduce costs.
- Drive the introduction and application of new technologies and automation equipment, track the function and performance of newly introduced equipment, organize and coordinate training for relevant equipment personnel to meet the company's strategic development needs.

### Job Requirements

- Technical Certificate, Diploma of mold, machinery or equivalent preferred
- Min 5 years of injection molding related experience or related training
- Familiar with the working principle of the equipment, circuit diagram, hydraulic schematic diagram, mechanical maintenance knowledge.
