Job Description

Job Title: Clinical Application Specialist

Location: Singapore

About:

Our client is a fast-growing medical technology company seeking a trained Radiographer who is looking to transition from a hospital clinical setting into the medical device industry.

In this role, you will not just be taking images; you will be using your expertise in CT/MRI interpretation to assist Interventional Radiologists in performing precise, minimally invasive cancer treatments.

Key Responsibilities:

- Provide expert technical and clinical support to Interventional Radiologists and their teams during oncology procedures in the lab/operating theatre. This includes operating the navigation system, assisting with image fusion (CT/MRI), and guiding trajectory planning.
- Conduct comprehensive training sessions and workshops for physicians, radiographers, and other hospital staff on the safe, effective, and optimal use of the navigation system and associated workflows.
- Utilize your strong background in cross-sectional anatomy and CT/MRI interpretation to assist in pre-procedural planning and real-time intra-procedural guidance with the navigation system.
- Provide first-line technical support and troubleshooting for the system during clinical cases and training sessions, escalating complex issues to internal teams as needed.

Qualifications:

- Diploma or bachelor's degree in Diagnostic Radiography or Medical Imaging.
- Minimum of 3 years of post-registration clinical experience as a Radiographer, preferably in a hospital or diagnostic imaging centre in Singapore.
- Proficiency in performing general radiography and at least one other advanced modality (CT, MRI, or Ultrasound).

Interested applicants, please click **APPLY NOW**.

Please note, only shortlisted candidates will be contacted.
