Job Description

About the Role

We are supporting a reputable international construction group in the search for a senior-level Project Manager to support a Data Centre project, with additional exposure to industrial / factory developments within the organisation's project portfolio.

This is a project-based role and is critical to ensuring strong delivery of MEP-intensive construction works. The successful candidate will provide leadership across site operations and drive project execution from construction through completion.

Key Responsibilities

- Lead and manage Data Centre construction projects, with strong emphasis on MEP systems (Mechanical, Electrical & Plumbing)
- Oversee MEP coordination, installation, testing, and commissioning activities
- Manage overall site operations, planning, scheduling, and execution of works
- Coordinate contractors, subcontractors, consultants, and MEP specialists

- Monitor project progress, quality, safety, and contractual compliance
- Ensure alignment between MEP works and the overall construction programme
- Provide regular progress updates and reporting to senior management

Requirements

- Degree in Mechanical or Electrical Engineering
- Minimum 10 years total working experience in industrial and data center projects
- Senior-level Project Manager experience in Data Centre projects
- Strong background in MEP and project / site management
- Proven experience handling MEP-intensive, technically complex projects
- Exposure to industrial / factory projects is an added advantage
- Strong leadership, coordination, and site execution capability
- Exposure to Japanese construction practices is not required
- Willingness to be deployed to project sites as required (deployment details to be confirmed)
