Job Description

You will be working as a front-end engineer at a Tokyo Stock Exchange Prime-listed company that provides internet domain management services. The project is based on AI-driven development, and you will use AI to code while designing the system.

You will primarily be involved in development work for the following systems:

- New development and modification of business logic required for the rental server/VPS business
- New development and modification of customer-facing screens (sign-up, control panel)

Your work will also involve communicating with various stakeholders, including the front-end team, back-end team, and business department.

- Start Date: Immediate or March/April 2026
- Positions Available: 2

- Location: Shibuya station
- Remote Work Frequency: 2 days per week

Required Skills

[Required]
・Practical experience developing web applications using C# / .NET (5+ years)
・Modern front-end development experience using React / TypeScript
・Experience implementing UI using HTML / CSS / jQuery

[Preferred]
・Server-side development experience using ASP.NET Core Web API or ASP.NET MVC
・Development experience in an AWS environment
・AI-based coding and development experience
