### Job Description

Join a global team dedicated to transforming bold ideas into real-world impact. Collaborate with talented professionals around the world to help organizations rethink how they leverage technology to drive growth, spark innovation, and build a more sustainable future. From shaping strategic direction to designing and engineering advanced solutions in AI, cloud, and data, you'll play a key role in delivering meaningful projects that generate lasting value for businesses, communities, and your own professional journey.

**Key Responsibilities:**

- Design, deploy, and manage scalable, secure environments on Google Cloud Platform (GCP).
- Automate infrastructure provisioning and management using Infrastructure as Code (IaC) and scripting.
- Oversee monitoring, cost optimization, and security best practices.

- Diagnose complex technical issues and provide expert guidance and support.

---

## Required Skills

- Japanese/English bilingual fluency.
- In depth knowledge of core GCP services - compute engine, storage, Cloud functions, networking, IAM.
- Strong experience in Terraform/ ansible (IaC).
- Solid understanding of TCP/IP, DNS, Load balancing, VPCs and network security.

### Key Technologies:

- GCP Foundation: Deep, practical experience in designing and implementing GCP landing zones and organizational structures based on the Google Cloud Adoption Framework.
- GCP Networking: Advanced knowledge of VPC design, Shared VPCs, hybrid connectivity (Interconnect, VPN), and load balancing.
- GCP Security: Expertise in implementing security best practices, including IAM, resource policies, and network security controls.
- Infrastructure as Code: Strong proficiency in Terraform for automating the deployment of GCP infrastructure.

---
