Job Description

Key Responsibilities:

- **Data Architecture & Design:** Lead the analysis and design of Data Warehouse systems integrated with Production Systems (MES) to empower Business Intelligence (BI) reporting.
- **System Integration:** Align data structures with manufacturing processes and business requirements, ensuring seamless connectivity and real-time relevance.
- **Technology Research & Development:** Proactively explore and implement emerging technologies to enhance system efficiency and maintain a competitive edge.
- **Project Leadership:** Oversee the entire system lifecycle—from initial feasibility studies and R&D to full-scale corporate implementation.
- **Knowledge Mentorship:** Act as a technical consultant, providing high-level guidance, training, and best practices to team members and internal stakeholders.

Requirements:

- Education: Bachelor's Degree in Computer Science, Computer Engineering, Information Technology, or a related field.
- Experience: At least 5 years of professional experience in software development and information systems analysis.
- Technical Skills:
 - Deep understanding of System Development Life Cycles (SDLC).
 - Proficiency in programming languages: Java, Python, or C++.
 - Expertise in Database Systems and SQL is essential.
- Core Competencies:
 - Analytical Thinking: Ability to translate complex business challenges into robust IT and data solutions.
 - Problem-Solving: Exceptional troubleshooting skills with a focus on system optimization and performance
