Job Description

This role involves designing, developing, and maintaining scalable backend services using Java and modern frameworks like Spring Boot. The engineer will collaborate with cross-functional teams to deliver high-quality features, improve system performance, and support large-scale platform operations.

Client Details

The hiring company is a well-established business services provider with a robust technology department. As part of a medium-sized team, they focus on delivering innovative solutions to their clients.

Description

- Design, develop, and maintain backend services using Java and frameworks like Spring Boot.
- Collaborate with cross-functional teams to deliver new features and improve system performance.
- Write clean, tested, and maintainable code while following modern engineering best practices.
- Troubleshoot production issues, optimize system performance, and contribute to continuous process improvements.

Job Offer

- 1 day remote work
- Opportunity to work in the business services industry with a reputable company.
- Engaging projects in a collaborative and professional environment.

Required Skills

A successful applicant should have:

- Proficiency in Java (5+ years) programming and related frameworks.
- Experience in developing and maintaining software applications.
- Familiarity with software development best practices.
- Ability to work collaboratively within a technology-focused team.
- Effective communication skills to convey technical concepts clearly.

Company Description

The hiring company is a well-established business services provider with a robust technology department. As part of a medium-sized team, they focus on delivering innovative solutions to their clients.
