Job Description

This role involves designing and building an Internal Developer Platform that streamlines development workflows, accelerates delivery, and provides a unified, high-quality experience for software engineers. The position requires strong software engineering expertise to integrate tools, automate processes, and continuously enhance performance, reliability, and developer productivity.

Client Details

The employer is a large organization in the retail industry with a focus on innovative and advanced technology solutions. They are committed to delivering excellence and maintaining a high standard of service.

Description

- Design, build, and enhance an Internal Developer Platform using modern languages such as TypeScript/JavaScript, Go, Python, and Node.js to improve developer workflows and accelerate software delivery.
- Develop and integrate cloud-native solutions across AWS, Azure, and GCP, leveraging Docker, Kubernetes, and

Helm to create scalable, reliable platform capabilities.

- Build and automate CI/CD pipelines using tools like GitHub Actions, Jenkins, and ArgoCD, ensuring smooth, consistent, and secure deployment experiences for engineering teams.
- Continuously improve platform reliability and visibility through IaC (Terraform), monitoring tooling (Prometheus, Grafana), and best practices in IDP architecture and developer experience.

Job Offer

- Competitive salary
- Complimentary meals provided at the cafeteria.
- Opportunity to work in Tokyo, a vibrant and dynamic city.
- Full time temporary position with a high possibility of conversion to permanent

To apply online please click the 'Apply' button below. For a confidential discussion about this role please contact Serina Miyazono on +81 3 6627 6130.

Required Skills

- Brings 7+ years of software engineering or DevOps experience, with strong, hands-on proficiency in Golang and solid skills in TypeScript/JavaScript, Python, or Node.js.
 - Has practical experience working with Docker, Kubernetes, and Helm, building reliable, cloud-native systems across AWS, Azure, or GCP.
 - Demonstrates proven ability to design and maintain CI/CD pipelines using GitHub Actions, Jenkins, or ArgoCD, along with solid understanding of Terraform for IaC.
 - Shows confidence in monitoring, troubleshooting, and optimizing platforms using Prometheus and Grafana, with a focus on improving developer experience.
-
