## Job Description

This role focuses on designing and developing high-availability, cloud-native backend microservices for a large-scale B2C platform. The position involves working with distributed architectures, active-active systems, and modern technologies such as Java, Spring Boot, GSLB, and YugabyteDB.

**Client Details**

The company is a large organization within the retail industry, known for its innovative approach to leveraging technology to enhance operations. Based in Tokyo, the company offers a collaborative and supportive work environment.

**Description**

- Design, develop, and maintain backend microservices using Java, Spring Boot, and cloud-native architecture principles.
- Build high-availability, active-active systems leveraging GSLB, distributed databases such as YugabyteDB, and object storage solutions.

- Contribute to the operation and continuous improvement of B2C platform services, ensuring scalability, performance, and security.
- Work within modern DevOps practices, with exposure to Kubernetes, Golang, message queues, and infrastructure-as-code tools.

**Job Offer**

- Free meals at the cafeteria.
- Opportunity to work in a large organization within the retail industry.
- A chance to contribute to innovative technology projects in Tokyo.

To apply online please click the 'Apply' button below. For a confidential discussion about this role please contact Serina Miyazono on +81 3 6627 6130.

---

## Required Skills

- Possesses 7+ years of backend development experience with strong proficiency in Java, Spring Boot, and cloud-native microservices.
- Has solid expertise in active-active architectures, GSLB, distributed databases such as YugabyteDB, and high-availability system design.
- Communicates effectively in an international environment with native-level English and conversational-level Japanese (N3-N2) or higher.
- Demonstrates strong problem-solving skills and adaptability, with added value from experience in Golang, Kubernetes, message queues, or infrastructure-as-code tools.
