#### Job Description

This role focuses on designing and improving large-scale, high-performance Java backend systems while contributing to API and microservices development. It offers a collaborative, fast-paced environment where strong Japanese communication skills and a passion for clean, scalable engineering are essential.

**Client Details**

The employer is a large organization operating within the Technology & Telecoms industry. They are committed to delivering cutting-edge solutions and fostering a work environment that encourages technical excellence.

**Description**

- Design, build, and maintain Java-based backend systems, REST APIs, and microservices.
- Improve performance and code quality through refactoring, tuning, and best-practice engineering.
- Collaborate closely with cross-functional teams and participate in code reviews, CI/CD, and Agile workflows.
- Communicate requirements, progress, and technical decisions effectively in Japanese.

**Job Offer**

- Opportunity to work in the vibrant city of Tokyo.
- A chance to contribute to innovative technology solutions.

To apply online please click the 'Apply' button below. For a confidential discussion about this role please contact Serina Miyazono on +81 3 6627 6130.

---

**Required Skills**

- Brings solid hands-on experience with Java, Spring/Spring Boot (4+ years) and modern backend development practices.
  - Communicates confidently in Japanese and collaborates effectively in a multicultural engineering environment.
  - Demonstrates strong problem-solving skills, ownership, and a proactive approach to improving systems and code quality.
  - Shows adaptability, curiosity, and a willingness to learn new technologies in a fast-moving environment.
-
