No permission to work in Japan required

Job Description

COMPANY OVERVIEW
Our client is firm that builds AI-driven software through data-powered automation and forecasting. They provide tailored technology solutions that enhance decision-making and operational efficiency.

JOB RESPONSIBILITIES

- Build modular, production-ready code deployable across cloud (AWS/GCP/Azure) and on-prem environments.

- Re-architect existing systems to convert complex retail and business needs into scalable software components.

- Develop AI-driven system components that turn research models into reliable, high-performing solutions.

- Improve development workflows, architecture patterns, coding standards, and DevOps/MLOps practices.

- Conduct code reviews and ensure high standards for security, performance, and maintainability.

JOB REQUIREMENTS

- Bachelor's/Master's in Computer Science, AI, Operations Research, or related field.

- 4+ years in AI/ML or software engineering with experience deploying production systems.

- Hands-on experience with cloud infrastructure-as-code and cloud/on-prem deployments (Docker, Kubernetes, CI/CD).

- Strong background in microservices architecture, API/system design, and Python.

- Experience with SQL/NoSQL databases and testing frameworks (e.g., PyTest).

- Bonus: experience deploying AI models (Airflow, Prefect, Ray), reporting tools (Tableau, Holistics), or supply chain areas like inventory optimization and demand forecasting.

Working Location: Singapore
