Job Description

This role leads the design, development, and operation of large-scale Java backend systems, taking ownership of high-traffic, mission-critical services. It also involves guiding a small engineering team, driving technical decisions, and ensuring stable performance in complex production environments.

Client Details

The employer is a large organization within the retail industry, known for embracing technology to enhance customer experiences. They are committed to delivering excellence and innovation through their cutting-edge projects.

Description

- Lead the design, development, testing, and release of backend features for large-scale Java systems.
- Drive technical decisions and provide guidance to a small engineering team throughout the project lifecycle.
- Ensure stable system operation through proactive monitoring, troubleshooting, and handling production inquiries.
- Collaborate with cross-functional stakeholders to translate business requirements into efficient technical solutions.

Job Offer

- Opportunity to work on impactful projects in the ecommerce industry.
- Chance to collaborate with a large organization at the forefront of innovation.
- Exposure to the latest technologies and industry practices.

To apply online please click the 'Apply' button below. For a confidential discussion about this role please contact Serina Miyazono on +81 3 6627 6130.

Required Skills

- Has 7+ years of hands-on Java backend development experience, including work with frameworks such as Spring Boot or Play Framework.
 - Brings proven leadership experience, having guided a team of around five members as a Project Lead or Technical Lead.
 - Communicates effectively with both technical and non-technical stakeholders and excels in collaborative, cross-functional environments.
 - Demonstrates strong ownership and thrives in high-traffic production environments, with solid skills in troubleshooting, monitoring, and CI/CD practices.
-
