Job Description

Company Overview

A company in the manufacturing industry is hiring for an AI Engineer position. Operating in the electronics sector, the organization provides a stable and professional environment where employees can contribute to secure system operations and strengthen data protection practices.

Working location: VSIP II, Binh Duong

Job Description

- Design and develop AI solutions including predictive models, computer vision systems, and applications leveraging large language models
- Build and maintain integrations with manufacturing systems and factory data sources
- Collaborate with cross-functional teams to transform operational challenges into AI-driven solutions

- Deploy models into production environments, optimize performance, and ensure scalability
- Develop automation workflows and AI systems to improve operational efficiency
- Monitor model performance and continuously enhance solutions based on data insights
- Communicate technical concepts clearly to both technical and non-technical stakeholders

Qualifications

- Bachelor's degree or higher in Computer Science, Data Science, Electrical Engineering, or a related field
- 1 to 3 years of experience in software development or AI/ML engineering
- Strong foundation in Python, data structures, and algorithms
- Hands-on experience with ML/DL frameworks such as PyTorch, TensorFlow, or scikitlearn
- Familiarity with large language models, prompt engineering, and frameworks such as LangChain or LlamaIndex
- Experience deploying models to production environments such as APIs or containerized systems
- English proficiency equivalent to TOEIC 605 or similar certifications
- Experience with computer vision, AI agent systems, manufacturing data platforms, or quality methodologies is a plus
