High-School

Visa Status

No permission to work in Japan required

Job Description

Join a team-based engineering environment, building and improving enterprise web systems for major clients. You will contribute across the full development lifecycle — from design through to operations.

- Design and implement features for web applications
- Full lifecycle: design → development → testing → operations/maintenance
- Collaborate within a team of ~15–20 engineers (with PL/PM support)

- Write clean, maintainable code; contribute to reviews and shared standards
- Depending on experience, contribute upstream (requirements clarification, basic design)

Project examples:

- Enterprise web applications (internal workflow tools, business systems, portals)
- New feature development and continuous improvement of existing systems
- Modernization/upgrades (framework upgrades, refactoring)
- API integration and data flows between systems
- Performance, stability, and operational improvements

Required Skills

Required:

- 1+ year of hands-on software development experience (web or application)
- Framework-based development experience
- Experience with at least one of: Java / PHP / Python / C# / Ruby / Go

Nice to have:

- Backend or full-stack development experience
- Experience building DB-backed applications or APIs
- Git, code review, CI/CD experience
- Interest in PL/PM or Tech Lead track

Company Description
