Permission to work in Japan required

Job Description

This role focuses on designing, building, and operating scalable front-end systems for a large-scale e-commerce marketplace. You will lead architectural decisions while collaborating closely with designers and engineers to deliver high-quality, user-facing features.

Client Details

Our client is a **leading large-scale consumer internet and e-commerce platform** operating at national scale in Japan. The organization delivers services to tens of millions of users and is known for its complex, high-traffic systems and strong engineering culture.

Description

- Act as a core project member for new and existing front-end features, covering design, development, testing, and release
- Lead technical decision-making for high-traffic web systems, including architecture and performance optimization

- Translate UI/UX designs and wireframes into high-quality, maintainable front-end code
- Monitor production services, troubleshoot issues, and drive root-cause analysis and improvements
- Refactor existing systems and introduce appropriate technologies, architectures, and tooling
- Collaborate with designers, backend engineers, and stakeholders across teams

Job Offer

- Long-term contract opportunity with stable renewals
- Exposure to one of Japan's largest consumer-facing digital platforms
- Highly challenging technical environment with real-scale performance demands
- Opportunity to influence architecture, tooling, and engineering standards
- Collaborative, international engineering team

To apply online please click the 'Apply' button below. For a confidential discussion about this role please contact Hikari Takamura on +813 6832 8903.

Required Skills

- Proven experience of technical lead experience on high-traffic web systems
 - Front-end development using **HTML, CSS, and JavaScript**
 - Experience with **React, Redux, and TypeScript**
 - Strong experience designing front-end architecture from scratch (components, state management, performance, UX, CDN usage)
 - Hands-on experience with unit testing, integration testing, and E2E testing
 - Proficiency with JavaScript testing frameworks (e.g., Jest, WDIO, Intern)
 - Solid understanding of asynchronous and parallel processing (AJAX, Promises, Web Workers, WebSockets)
 - Experience with Web APIs (REST, JSON, CORS)
 - Working knowledge of Linux operations and investigation
 - Experience with Git-based version control and CI/CD tools (e.g., Jenkins)
-
