Job Description

This role leads the ownership and evolution of the Japan data platform, driving reliability, data quality, and governance while delivering high-impact data solutions aligned to business needs. You will lead and mentor a data engineering team, act as the key partner to Japan stakeholders, and influence the global data strategy through close collaboration with international teams.

Client Details

This opportunity is with a well-established organization in the FMCG industry. The company is a large organization known for its innovative approach to technology and its commitment to maintaining excellence in all aspects of its operations.

Description

Own and evolve a regional data platform, ensuring high reliability, performance, data quality, and strong governance standards.

Lead the design and delivery of scalable data pipelines, data models, and API-driven integrations aligned to business needs.

Partner closely with stakeholders to translate requirements into actionable data solutions and clearly communicate platform outcomes.

Manage and develop a distributed data engineering team, setting best practices, driving delivery excellence, and mentoring talent.

Job Offer

- Competitive monthly salary
- Opportunity to work in the FMCG industry within a large organization.
- Exposure to cutting-edge data technologies and tools.
- Hybrid work mode

To apply online please click the 'Apply' button below. For a confidential discussion about this role please contact Serina Miyazono on +81 3 6627 6130.

Required Skills

- The successful applicant will be a senior data engineering professional with strong technical expertise and proven leadership experience in complex, enterprise-scale environments. You bring the ability to combine hands-on technical depth with strategic thinking, effectively translating business needs into high-quality, scalable data solutions.
 - You are an excellent communicator who can build trust with stakeholders and lead distributed teams across regions and cultures. Business-level Japanese and business-level English are required, as the role involves daily collaboration with local business teams, offshore engineers, and global partners.
