Job Description

This role involves designing and building secure, high-performance Java backend systems for critical fintech products. You'll work with modern technologies in a fast-paced environment where reliability, scalability, and security are essential.

Client Details

The employer is a large organization in the professional services industry, known for delivering innovative technology solutions. With a focus on high-quality projects, the company provides a robust platform for professionals to enhance their skills and contribute to impactful initiatives.

Description

- Design, develop, and maintain scalable Java backend services for fintech platforms
- Build and support RESTful APIs and microservices with a focus on performance and security
- Collaborate with cross-functional teams to deliver reliable, high-quality features
- Troubleshoot, optimize, and maintain production systems handling financial data

Job Offer

- Competitive monthly salary
- Collaborative work environment within the technology department.
- Chance to enhance skills and gain valuable experience in a large organization.

To apply online please click the 'Apply' button below. For a confidential discussion about this role please contact Serina Miyazono on +81 3 6627 6130.

Required Skills

- Minimum 6+ years of professional experience as a Java software engineer
 - Strong expertise in Java, Spring/Spring Boot, and backend system design
 - Proven experience building scalable, secure systems, ideally in fintech or financial services
 - Strong problem-solving skills with the ability to work effectively in cross-functional teams
-
