Job Description

Data & AI Platform Engineer

Compensation: ¥10M – ¥18M

Languages: Japanese and English

Location: Tokyo, Japan (Remote-friendly)

Director positions are also available

We are scaling our Data & AI capabilities and are looking for an engineer who wants to build at the cutting edge of LLMs, AI agents, and data platforms.

With millions of digital assets and a rapidly growing global footprint, the team is investing heavily in AI-

driven infrastructure, AIGC, and next-generation content ecosystems.

What You'll Work On

- Build secure, scalable AI and data platforms from the ground up
- Design and optimize ETL pipelines and data foundations
- Develop LLM-powered systems (RAG, orchestration, MCP)
- Create AI agent workflows for real business use cases
- Build evaluation frameworks for LLM performance
- Integrate internal tools with AI-driven automation

Who You Are

- Product-minded and customer-focused
- Take ownership and drive impact
- Thrive in fast-paced, collaborative environments
- Curious, hands-on, and detail-oriented

Why Join

- Work on real-world AI systems at scale
- Contribute to the future of AI and content ecosystems
- Join a high-growth, globally expanding team

Required Skills

What You Bring

- Experience with data pipelines (Python, Go, Java, etc.)
- Strong knowledge of data warehouses (BigQuery, Snowflake, Databricks)
- Hands-on experience with LLM APIs (OpenAI, Anthropic, etc.)
- Experience building RAG systems (LangChain, LlamaIndex)
- Solid backend engineering skills (APIs, microservices)

Nice to Have

- Experience with Model Context Protocol (MCP)
- Familiarity with vector databases (Pinecone, Weaviate, pgvector)
- Experience with LLM evaluation tools (Ragas, LangSmith)
- Infrastructure-as-Code experience (Terraform)
