Job Description

This role supports corporate sales operations by building, maintaining, and improving data pipelines and BI reports used in daily decision-making. You will work closely with business users and internal system teams to deliver reliable, high-quality reporting solutions.

Client Details

Our client is a **large, well-established technology and telecommunications group** operating complex enterprise systems to support corporate customers. The organisation is known for its strong engineering culture, large-scale data environments, and long-term system modernisation initiatives in Japan.

Description

- Support and enhance BI reports used by corporate sales teams on a daily basis
- Review and validate SQL queries created by internal system teams
- Design and build ETL processes within a BI platform based on business requirements
- Investigate, debug, and resolve data and report-related issues
- Process and transform data from a NoSQL database into relational databases for reporting
- Conduct testing and support release activities in coordination with stakeholders

- Collaborate closely with business users to translate reporting needs into technical solutions

Job Offer

- Opportunity to work on mission-critical enterprise data and reporting systems
- Exposure to large-scale BI and analytics environments
- Collaborative, technically strong team culture
- Hybrid-style working environment in Tokyo

To apply online please click the 'Apply' button below. For a confidential discussion about this role please contact Serena Wu on +81 3 6627 6137.

Required Skills

- 7+ years of hands-on experience with **relational databases**
- 7+ years of **SQL** development experience in a production environment
- 3-5 years of **Python** experience, including new development, root-cause analysis, and bug fixing
- Experience with additional programming or scripting languages
- Business-level **Japanese and English** communication skills (both required)

Nice to Have:

- Practical experience with **DOMO** or similar BI tools
 - Experience with **Couchbase** or other document-based / NoSQL databases
 - Knowledge of **API integrations**
 - Additional language skills such as **Chinese**
-
