Business Level

**Minimum Japanese Level**

Business Level

**Minimum Education Level**

Bachelor's Degree

**Visa Status**

Permission to work in Japan required

#### Job Description

Product manager role with a focus and background of UI/UX needed.

Build an analytics SaaS platform with a multinational, open minded business.

**Client Details**

Global Technology Business Covering: E-Commerce, Mobile, Banking / Fin-tech and more

**Description**

Work on a Web SaaS solution that covers data collection, visualisation, and decision-making support.

Our client is seeking a Product Manager with a strong UI/UX background. This role is ideal for someone who thrives at the intersection of product strategy, user experience, and data-driven decision-making.

This role is intentionally hybrid. You will own the end-to-end experience of the product UI, from problem discovery and interaction design through delivery and post-launch optimisation. While you will collaborate with engineers and other PMs,

you must be capable of independently designing high-quality prototypes using modern, AI-assisted design tools.

This role is best suited for a Product Manager who:

-Thinks like a designer

-Designs like a product owner

-Makes decisions grounded in data

#### Product & UX Ownership

Own the vision, strategy, and roadmap for the user experience.

Translate complex analytics and data requirements into clear, intuitive prototypes.

Define success metrics and continuously optimise UX based on usage data and feedback.

#### Hands-On Design & Prototyping

Independently create wireframes, high-fidelity mockups, and interactive prototypes.

Leverage AI-assisted tools (e.g., Figma AI, Cursor, etc.) to accelerate design and iteration.

Validate concepts quickly through prototypes before engineering investment.

Note: Designer support is limited. Strong independent design capability is required, not optional.

#### Cross-Functional Execution

Partner closely with engineers to ensure designs are feasible, scalable, and well-implemented.

Write clear PRDs, user stories, and acceptance criteria with strong UX intent.

Advocate for UX priorities during planning, grooming, and sprint reviews.

#### Analytics & Data Fluency

Understand and work confidently with analytics concepts, including:

Event tracking

Funnels

Dimensions & metrics

Basic SQL or query-based data exploration

Monitor feature adoption, behavioural trends, and KPIs to guide product decisions.

#### Standards, Quality & Compliance

Build and maintain design systems and reusable UI components.

Ensure compliance with accessibility (WCAG) and data privacy standards (GDPR, APPI).

Support localisation and internationalisation requirements across markets.

#### Market Awareness

Conduct competitive analysis across leading analytics platforms (e.g., GA, Amplitude, Adobe Analytics).

Stay current on SaaS UX trends, analytics tooling, and AI-assisted design workflows.

#### Job Offer

Hybrid work, cutting edge tech, very collaborative team, interesting product and leading company.

To apply online please click the 'Apply' button below. For a confidential discussion about this role please contact Tom Emms on +81 3 6402 1596.
