Job Description

This role is for a Senior Backend Engineer responsible for designing, developing, and operating high-scale APIs and backend systems that handle critical cart and order data.

You will lead technical efforts, ensure system reliability, and collaborate across functions to deliver high-performance, maintainable solutions.

Client Details

The company is a well-established large organization within the technology and telecoms industry. It is known for its commitment to innovation and delivering cutting-edge solutions to clients worldwide. The team values technical proficiency and offers an environment that encourages professional growth.

Description

- Develop and maintain high-quality Java applications to support business needs.
- Write clean, efficient, and well-documented code following best practices.
- Debug and resolve technical issues to ensure seamless application performance.
- Participate in code reviews to maintain code quality and knowledge sharing.
- Ensure the scalability and reliability of applications in a production environment.
- Assist in the integration of third-party APIs and services into existing systems.

Job Offer

- Chance to collaborate with a talented and experienced team.
- Access to a professional environment that fosters technical growth.
- 1 day remote, hybrid role
- free office meals

To apply online please click the 'Apply' button below. For a confidential discussion about this role please contact Serina Miyazono on +81 3 6627 6130.

Required Skills

- A strong background in Java programming and software development.
 - Proficiency in designing and implementing scalable and maintainable code.
 - Experience with debugging and resolving software issues effectively.
 - Familiarity with integrating third-party APIs and services.
 - A proactive approach to learning new tools and technologies in the technology and telecoms industry.
 - Strong communication skills to collaborate effectively with team members.
-
