Job Description

Overview

We are looking for a Data Engineer to join an internal technology team and support a large-scale data platform environment. The role focuses on maintaining and improving existing data pipelines while supporting new data integration needs.

Responsibilities

- Maintain and improve existing data pipelines (700+ pipelines)
- Develop and optimize batch processing jobs using Python and SQL

- Monitor pipeline performance and troubleshoot issues when they occur
- Handle data integration with internal systems and new data sources
- Support ongoing improvements to data workflows and system stability

Required Skills

- Experience with Python for data processing or backend development
- Experience with data pipelines / ETL / batch processing
- Strong SQL skills
- Ability to troubleshoot and resolve production issues independently
- Business-level Japanese

Company Description
